

The Screen Share Room

The screen share room shows a window from the speaker's computer screen.

Clicking on the screen or tapping [Alt] or [Ctrl]+[Alt]+[Shift] brings up the button bar at the bottom and an additional **View Options** menu at the top.

In **Full Screen** mode the shared window takes up your entire screen. Additional Zoom tools like chat float as separate windows above this display.

In **Side-by-side** mode these tools attach to the side of the shared window.

You can **Request Remote Control** from the speaker, which lets you manipulate the shared window with your mouse and keyboard as if it was your own. Any changes you make alter the document on the speaker's computer.

By turning on **Annotate**, you can write or paint on the shared window without affecting the underlying document. Any changes disappear when the screen share ends.

Select **Give Back Remote Control** from the **View Options** menu to return control to the speaker.

If you have difficulty reading the shared screen, you can increase the **Zoom Ratio**. The screen will enlarge up to triple. By clicking the presentation with the **Hand cursor**, you can drag to reposition the screen to read different parts. A new menu choice, **Follow Presenter's Pointer**, will reposition the enlarged screen to where the speaker's mouse cursor moves to. If the presenter merely advances a slide show by hitting spacebar, however, the mouse cursor doesn't move. Some presentations limit the zoom ratios you can select.
